AWK Basic Examples Tutorials Point

AWK provides a built-in length function that returns the length of the string. $0 variable stores the entire line and in the absence of a body block, default action is taken, i.e., the print action. Hence, if a line has more than 18 characters, then the comparison results true and the line gets printed.

30 Examples for awk command in text processing Like Geeks

In the above example, awk fails to process fields properly because the fields are separated by new lines and not spaces. You need to set the FS to the newline (\n) and the RS to a blank text, so empty lines will be considered separators.

Common threads Awk by example Part 3 String functions

While awk's print statement does do the job most of the time, sometimes more is needed. For those times, awk offers two good old friends called printf() and sprintf(). Yes, these functions, like so many other awk parts, are identical to their C counterparts. printf() will print a formatted string to
