Nervous System Definition Function Organs Diseases

Organs of the Nervous System. The nervous system in humans is made of the brain and spinal cord, along with the primary sense organs and all the nerves associated with these organs. The brain and the spinal cord form the central nervous system (CNS). All other neuronal tissue is brought under the umbrella of the peripheral nervous system (PNS). Therefore, the PNS includes neurons within sense organs, other sensory nerves, and all motor nerves that deliver messages to different parts of the body.
