Step by Step Guide to Excel Formulas for Beginners

Excel first carries out the subtraction operation (C2-C4) or (5-6), since it is surrounded by brackets and gets the result of -1. Excel multiplies the -1 by 7 (the content of cell C1) to get an answer of -7. Excel skips ahead to divide 9/3 (the content of cells C3 and C5) because division comes before addition in BEDMAS to get a result of 3.

Excel Made Easy a Beginner's Guide to using Microsoft Excel

Each cell has a specific format. In Excel, a cell's format tells Excel how to display the contents of the cell. A cell's format may be different than the cell contents. For example, you may have entered 8.9521 in a cell. But if the cell was formatted to display only two decimal places, Excel will display 8.95 in that worksheet cell. However, Excel will still use the real cell value that you entered, 8.9521 when performing calculations that involve that cell.
