Fundamentals of Human Neuropsychology Amazon de Bryan

At last I've found the fundamental textbook in the neurosciences that really does cover the fundamentals. This is an advanced undergraduate level text that assumes little in the way of prerequisites, although courses in biology and psychology undoubtedly would be helpful. The text is clear and well-written, while at the same time avoiding the pitfall of being dumbed down for the reader.

Fundamentals of Human Neuropsychology by Bryan Kolb

Fundamentals of Human Neuropsychology is a contemporary, hugely informative textbook on the subject with a well-organized layout and clear text. It's probably one of the best to be found on neuropsychology, and has a mostly scientific approach instead of a clinical one. It wonderfully links biology to behaviour, and provides a ridiculous amount of real life examples that aptly illustrate the information and/or theories presented in the text.
