HEPES Buffer Recipe ENCO

Protocol: HEPES Buffer Recipe Description: HEPES is a general-purpose zwitterionic buffer which does not bind magnesium, calcium, manganese(II) or copper (II) ions. Buffer strength for cell culture applications is usually in the range of 10 to 25 mM.

You can store this buffer at room temperature, or at 4C. If you store it in the fridge, you have to warm it up to room temperature before you start using it. Generally with buffers it is possible that salts precipitate if buffers are stored at low temperatures. Then you may need to heat it up to redissolve the salts.
