Introduction to Linear Algebra 5th Edition MIT Mathematics

linear algebra is to take linear combinations of column vectors. This is exactly the result of a matrix-vector multiplication. Ax is a combination of the columns of A . When we take all combinations Ax of the column vectors, we get the column space. If this space includes the vector b , we can solve the equation $Ax = b$.

Introduction to Linear Algebra Fifth Edition Gilbert

Gilbert Strang's textbooks have changed the entire approach to learning linear algebra -- away from abstract vector spaces to specific examples of the four fundamental subspaces: the column space and nullspace of A and A' .
