

LCOS PROJECTOR

RELATED BOOK :

Overview of LCOS technology projectorcentral.com

LCOS-based projectors typically use three LCOS chips, one each to modulate light in the red, green, and blue channels. In this it is similar to an LCD projector which uses three LCD panels. Both LCOS and LCD projectors deliver the red, green, and blue components of the light to the screen simultaneously.

LCoS Wikipedia

LCoS ist die Abkürzung für englisch Liquid Crystal on Silicon (dt. Flüssigkristalle auf [einem] Silizium[substrat]) und bezeichnet eine Technik für Anzeigegeräte ähnlich einem Flüssigkristallbildschirm (LCD). Im Gegensatz zu diesem lässt es das Licht allerdings nicht durch, sondern reflektiert es.

DLP vs LCD vs LCoS Projector tech pros and cons CNET

LCoS, or liquid crystal on silicon, is sort of a hybrid between LCD and DLP. It uses liquid crystal chips with a mirrored backing. So they're reflective, like DLP, but block light using liquid crystal, like LCDs. Sony and JVC are the primary manufacturers of LCoS projectors, which they call SXRD and D-ILA, respectively.

LCoS Projectors for Home Theater

LCoS projectors are more expensive than the competing technologies, typically costing between \$3,000-\$25,000. In contrast, entry-level DLP projectors are available for under \$500 and LCD projectors don't start out much higher. LCoS projectors offer the least visible pixels, and excellent dynamic range.

Liquid crystal on silicon Wikipedia

LCoS was initially developed for projection televisions but is now used for wavelength selective switching, structured illumination, near-eye displays and optical pulse shaping. By way of comparison, some LCD projectors use transmissive LCD, allowing light to pass through the liquid crystal.
