### **Mass spectrometry Wikipedia**

Mass spectrometry (MS) is an analytical technique that ionizes chemical species and sorts the ions based on their mass-to-charge ratio. In simpler terms, a mass spectrum measures the masses within a sample. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

Mass spectrometry therefore not only provides a specific molecular mass value, but it may also establish the molecular formula of an unknown compound. Tables of precise mass values for any molecule or ion are available in libraries; however, the mass calculator provided below serves the same purpose.

### **Mass Spectrometry and Interpreting Mass Spectra Compound**

Mass spectrometry allows us to measure the masses of atoms and molecules, and also obtain information about their chemical structure. Before we talk about interpreting spectra, let s discuss how they are generated in the first place. First, we need to generate ions from our sample.
