New Blood Pressure Medication Recall Due To Life

Earlier this month, the FDA expanded a blood pressure medication recall that started in July, according to a report from the Inquisitr. Drugs containing valsartan experienced a recall over concerns over the drug being tainted with a compound that potentially increases cancer risks. The affected drugs in that recall may have been contaminated with N-nitrosodimethylamine or NDMA, which the U.S. Environmental Protection Agency considers a possible carcinogen.

Drugs Commonly Used to Treat High Blood Pressure

If the blood pressure remains elevated with combination therapy using a calcium blocker plus an ACE or ARB drug, a thiazide drug will usually be added as a third drug. And if this combination still fails to control the blood pressure, a fourth drug (usually spironolactone, a non-thiazide diuretic) may be added.
