Another term you may have come across, a photovoltaic array, is simply used to describe a system that is composed of multiple PV panels. The Photovoltaic System as a Whole. As you can see, photovoltaic cells and panels are both integral, closely connected parts of your solar PV system. Photovoltaic cells are the main component that makes up a solar panel, while solar panels are a vital component that makes up a solar system. http://ebookslibrary.club/What-is-the-Difference-Between-Solar-Panels-and--.pdf

How do Photovoltaics Work Science Mission Directorate

A number of solar cells electrically connected to each other and mounted in a support structure or frame is called a photovoltaic module. Modules are designed to supply electricity at a certain voltage, such as a common 12 volts system. The current produced is directly dependent on how much light strikes the module.

Photovoltaics Wikipedia

A photovoltaic system employs solar panels, each comprising a number of solar cells, which generate electrical power. PV installations may be ground-mounted, rooftop mounted or wall mounted. The mount may be fixed, or use a solar tracker to follow the sun across the sky.
