Safe PM Fiber Rotation The new rotation mechanism on the S183PMII Fusion Splicer allows PM fiber to rotate while keeping it straight and stable. This minimizes fiber twist, which can be detrimental to sensitive splicing applications.

Fusion splicing Wikipedia

Fusion splicing is the act of joining two optical fibers end-to-end using heat. The goal is to fuse the two fibers together in such a way that light passing through the fibers is not scattered or reflected back by the splice, and so that the splice and the region surrounding it are almost as strong as the intact fiber.

Fusion Splicer Fiber Optic Fusion Splicing Machine

Fiber Optic Fusion splicer is a must in the process of properly joining two bare optical fibers together. Since splicing fiber optic cables together is a much more complex process than splicing metal wires, it works together with the fiber cleaver to meet the end need.
