

## THE DISEASE MS

## **RELATED BOOK :**

### **Multiple sclerosis Wikipedia**

Multiple sclerosis (MS) is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to communicate, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.

### **Multiple sclerosis Symptoms and causes Mayo Clinic**

In MS, the immune system attacks the protective sheath (myelin) that covers nerve fibers and causes communication problems between your brain and the rest of your body. Eventually, the disease can cause the nerves themselves to deteriorate or become permanently damaged.

### **MS the Disease National Multiple Sclerosis Society**

There are an estimated 8-10,000 children under the age of 18 who also live with MS. Studies indicate that genetic factors could make certain individuals more susceptible to the disease, but there is no evidence that MS is directly inherited. It occurs more commonly among Caucasians, especially those of northern European ancestry, but people of African, Asian, and Hispanic backgrounds are not immune.

### **Multiple Sclerosis MS Symptoms Causes Treatment Life**

Multiple sclerosis (MS) is thought to be an autoimmune disease; however, the exact cause is not known. Early signs and symptoms of MS are fatigue, bladder and bowel problems, vision problems, and numbness, tingling, or pain in certain areas of the body. There is no cure for MS, however, the symptoms can be managed with medication and therapies. Most people with MS live a normal life span.
