

THE MS DISEASE

RELATED BOOK :

Multiple sclerosis Wikipedia

Multiple sclerosis (MS) is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to communicate, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.

Multiple Sclerosis MS Symptoms Causes Treatment Life

Multiple sclerosis (MS) is thought to be an autoimmune disease; however, the exact cause is not known. Early signs and symptoms of MS are fatigue, bladder and bowel problems, vision problems, and numbness, tingling, or pain in certain areas of the body. There is no cure for MS, however, the symptoms can be managed with medication and therapies. Most people with MS live a normal life span.
