### **Connecting your VoIP system to the PSTN VoIP Supply**

Depending on where the voice traffic originates from your FXO gateway will convert the voice traffic into the proper form for receipt by the destination network (IP or PSTN). For example: If the voice traffic is originating from the PSTN the VoIP gateway will convert the analog voice signal into a digital signal. This digital signal is then compressed using a codec and broken into a series of packets that are transferred across the IP network using a signaling protocol.

### **SPA 3000 Voip to PSTN gateway setup Linksys Community**

For the call to get to the voip-to-pstn gateway you either have your account (Gizmo in your case) registered on the PSTN Line tab or on the Line 1 tab, not both. If the account is registered on the Line 1 tab you must forward the call on the User 1 tab to gw0, either forward all or forward on no answer. If the account is registered on the PSTN Line tab when the call is answered you should get either the three beeps or a dial tone depending on your setting for the authentication method.
