Understanding What Process Sigma Tells You About Your Process

Six Sigma process improvement methodology focuses on reducing defects, or failures to meet customer specifications. Process sigma is a measure of how well a process meets those specifications. At a sigma of 3, the process meets the requirements 93% of the time, while at a sigma of 6 the defect-free rate is 99.9997% of the time. For high-volume operations, performance of 93% or even 98% is usually not sufficient and results in a large number of poor outcomes.
